DETAILED ACTION

1. Claims 1-22 have been presented for examination.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, drawn to a parallel processor that transfers data from a global processor register to processor elements that are specified by setting the number of the processor element in the processor element and then specifying a range/bits/pointer value, classified in class 712 subclass 13.
 - II. Claims 12-22, drawn to a parallel processor that transfers data from a table memory to at least one register in the processor elements that are specified by an operation result flag, classified in class 712, subclass 14.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have unique ways of specifying a processor element and transferring data to the specified processing element. They cannot be used

in any combinational form (fig. 1 and 8). The first invention I details a transferring data from a register of a global processor to processing elements that are selected by a means of setting the number of the processor element in each processor element. Further it discloses that the data transfer is rendered through specifying a range/bits/pointer value. On the other hand, the second invention II details a completely different parallel processor, which transfers data between a table memory and registers in the processor elements that are selected by a means distinct from the first invention. It specifies the processor elements with which data transfer is initiated with the table memory that have a same value in a operation result flag set by the comparison of data to undergo the operation with data to be converted.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Mr. Paul Teng (Reg. No. 40,837) on March 8, 2004, to request an oral election to the above restriction requirement, but it did not result in an election being made.

6. Applicant is advised that the reply to this requirement, to be complete, must include an election of the invention to be examined even if the requirement is traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
